

[illegible]

Scrub							Tick each "10 m section" species also found in																				on site but not found in transects										
							Transect 1										Transect 2																				
							1 st nearest m	last m	1 st m	last m	10	20	30	40	50	60	70	80	90	100	10	20	30	40	50	60	70	80	90	100							
Blackthorn - <i>Prunus spinosa</i> .																																					
Brambles - <i>Rubus</i> spp.																																					
Broom - <i>Cytisus scoparius</i>																																					
Elder - <i>Sambucus nigra</i>																																					
Gorse - <i>Ulex europaeus</i>																																					
Sea-buckthorn - <i>Hippophae rhamnoides</i>																																					
Unknown or other																																					
Unknown or other																																					
Shingle characteristics							Roughly estimate percentages to nearest 5% in each category in a roughly 2x2m square per transect at start, middle and finish of transect																														
							S	M	F	S	M	F	Transect 1										Transect 2														
Colour	orangey																																				
	greyish																																				
Size - size range in brackets	cobbles (fist - head)																																				
	pebbles (50p - fist)																																				
	gravel (pea - 50p)																																				
	sand																																				
Shape	very rounded																																				
	inbetween																																				
	very angular																																				
Note also presence of or evidence for							Record distance along the transect that you find these features																														on site but not found in transects
Trampling e.g. paths made by people walking across shingle																																					
Concreted areas or other man-made structures																																					
Vehicular activity e.g. tyre tracks																																					
Dog mess																																					
Rabbit droppings																																					
Fire damage																																					
Garden waste																																					
Garden escapes																																					
Other damge and/or waste of note																																					
Shingle ridges																																					
Other obvious communities (tick if present)							Salt marsh			Salt lagoon																											
Brief description of what surrounds the beach							e.g. beach is surrounded by cliffs to west, a coast road on landward side and a harbour wall to the east																														
Other species of interest - do not have to be plant species (these will not necessarily form part of analysis but are very useful data to have)							1 st
