

DGN Oil

A wide variety of waste oils are now considered to be hazardous e.g. machine engine and lubricating oils (whether mineral, synthetic or readily-biodegradable). Any oil-soaked items (e.g. oily rags, oil filters, etc) are also considered to be hazardous. If you have waste oil or oil-soaked rags for disposal, or are in any doubt as to whether your oils are hazardous, contact the Health, Safety & Environment Office for advice. safety@sussex.ac.uk

The waste oil and any items contaminated with waste oil **must** be separately collected and safely stored prior to consignment as Special Waste. **On no account should any oil or oil-cleaning agent, be poured down the drains.**
