The wi-fi network at Sussex is called eduroam (short for education roaming). It’s used in Universities all over the world and, at Sussex, is available in most of the campus including the Library, cafés, seminar rooms, lecture theatres and social spaces.

This guide explains how to register and configure a Nexus device which has the standard version of Android. Other Android devices have slightly different screens but the process is the same.

If you are in doubt over any of the steps described in this guide, IT Services Enquiries in Shawcross will be able to help. Additional information about the wireless network can also be found online at:

sussex.ac.uk/its/connect
1. Register your device
• On your device, go to Settings and tap Wi-Fi
• From the list of networks, choose the Sussex wi-fi setup network (sussex.ac.uk-wifi-setup)
• Now go back to the home screen and open the web browser to go to the registration page (if this doesn’t display immediately, try waiting for a minute or so and trying again)
• Enter your IT username and password and make sure the box to register your device is checked. Click login.

2. Connect to eduroam
• Go to Settings, choose Wi-Fi and tap on eduroam
• Make sure EAP method is set to PEAP and set Phase 2 authentication to MSCHAPv2
• Leave CA certificate as unspecified
• For Identity, enter your IT username followed by @sussex.ac.uk. For example: ano23@sussex.ac.uk
• Leave Anonymous identity blank, put in your IT password and tap Connect

3. Forget the setup network
• Finally, make sure that you remove the setup network: in Settings, go to Wi-Fi, tap and hold on sussex.ac.uk-wifi-setup and choose Forget
(once you’re connected to eduroam, you no longer need the setup network and, as it doesn’t give internet access, it can stop you getting online if your device connects automatically to the setup wifi instead)
