The Taylor’s University School of Pharmacy (SOP) is a relatively new school. SOP had its first intake in 2011 and graduated its first cohort of students in 2014. Currently we only offer one programme, a Bachelor of Pharmacy (Honours) degree, a 4-year programme. Our course is taught in English with good staff-student ratio (1:8), good laboratory facilities and opportunity to transfer to University of South Australia, Adelaide after Year 2. We have MOUs for student and staff exchange with Mahidol University, Thailand. Additionally, we have just launched the Pharmaceutical Industry Student Adoption (PISA) programme that allows our students to be adopted by the following companies - Abbott Laboratories, Blackmores Malaysia, Johnson & Johnson, Novartis Corporation, Pfizer Malaysia and Roche Malaysia.

Enhance your insight into the practice of pharmacy with a study in an international setting in Taylor’s University, Subang Jaya, Malaysia. The course will focus on the practice of pharmacy in Malaysia in a retail, hospital, industry and regulatory setting. It will begin with an overview of the healthcare system and policies in Malaysia as well as an investigation into how this multicultural society influences the practice of pharmacy. Visits to the various pharmacy sites will be conducted. The pharmacy practice experience of other countries will be examined with a view of understanding why and where differences exist. Other topics covered include tropical diseases affecting Malaysians as well as use of traditional, herbal and complementary medicines.

By participating in this course, students will be able to:
- Learn about the practice of pharmacy in various settings in a Malaysian context
- Identify the fundamentals of the healthcare system and policies in Malaysia
- Understand the roles and responsibilities of various pharmaceutical bodies/associations in Malaysia
- Appreciate the influence of culture and language on the practice
- Identify common tropical diseases affecting the local community
- Discover common traditional and herbal medicines used and their role in the health system
