Abstract

Write a brief abstract here. This should be between 70 - 150 words long.

Content

Title: your title needs to tell enough of a story to let the casual reader passing along the corridor what the poster is about. The title should include, if possible, both the specific work you are doing as well as the international project you are involved with (if applicable). The title should also work for a non-expert reader. If necessary you can give a subtitle to offer further explanation.

Content: keep jargon and acronyms to a minimum; where you use concepts that would not be understood by a non-expert, they must be explained. This applies in the title as well as throughout the body of the poster.

You should aim to get as much information as possible across to your specific work you are doing as well as the international project of explanation is very important as well.

References should follow the Harvard style as shown below.

Equations should be typed out if possible, rather than inserted as images. This will make your poster look a lot more professional. Just go to Insert > Symbol to find any special characters you might need.

Remember - keep it simple! Keep the text concise, explain as many concepts as you can, keep equations to a minimum, and use plenty of pictures.

They should be eye-catching - you want people to stop and read them.

Sponsors and collaborating institutions

If applicable, and if you want, you can use the space at the bottom of the poster for the logos of any sponsors, collaborating institutions or facilities you have used. Don’t give logos of other universities here; if necessary these should be mentioned in the acknowledgements.

You can also use this space to let people know how international your research is by listing the flags of other countries involved in your research area, if applicable (flags are easy to find using Google image search).

You can resize these images depending on how many of them you need to insert, but remember, the key to a poster looking good is keeping everything aligned!

References and acknowledgements

Anyone else who collaborated with you on your project or assisted you should be listed here...
