Computer Based Exam (70%):

Students are asked to take the resit exam which will consist of short answer questions and one essay, as it was the case with the sit exam. The computer-based exam will be available on canvas and the students will be allowed 90 min to complete it.

Problem Set (15%):

Students are asked to take this assessment which evaluates material covered in the neuroanatomy practical and quiz. Students will have to answer these questions on canvas as a quiz. They will be allowed 60 minutes to complete it.

Software Exercise SOE (15%):

Students are asked to answer a set of questions that are based on the material covered during the second practical, on the action potential. In this resit, the students will not be asked to use the software, however they will need to answer a set of relevant questions that will be set up as a canvas quiz. They will be allowed 60 min to complete the quiz.
