

Career Lab : Student Consultancy Programme 2023

"I would definitely recommend the programme to other organisations. The students did an amazing job and gave us great recommendations!" Raphael Weiner, Co-founder of Brovation

Important information for organisations

Introduction

Our Career Lab programmes support all undergraduate students but is particularly targeted at those who are from [underrepresented groups](#). As part of the Student Consultancy Programme you can benefit from a group of final year undergraduate students, and a small number of taught postgraduate students, who will work on a live challenge faced by your organisation. By popular request, the programme has opened to taught postgraduate students, but priority spaces remain allocated to final year students.

Student Consultancy offers our valued partners the opportunity to tackle a live challenge whilst providing meaningful work experience to undergraduate final year and taught postgraduate students. Student groups of 5 will be from multidisciplinary backgrounds and spend a combined 100 hours on your challenge, presenting their final thoughts to you on completion. There is no financial obligation (the University provides a stipend directly to the students), the research will be carried out remotely, and the time commitment is very low. The programme is conducted through the University's consulting platform, [Riipen](#).

Students will have varying levels of work experience but will have strong research skills and a willingness to learn. They will receive training and support from the University throughout. There are limited project spaces and priority will be given to those that work towards the [UN's Sustainable Development Goals](#).

1. What can our students do for your organisation?

Organisations that become clients of the Student Consultancy programme will benefit from a group of 5 students who will research, analyse and recommend solutions to a challenge based on the project brief provided by you, on topics such as:

- **Environmental sustainability improvements**
Analyse current practices in your organisation and suggest areas where you can become more environmentally conscious and sustainable
- **Market/competitive analysis**
Identify your key competitors' strengths
Understand your target audience and what they are looking for
- **User experience testing**
Test a new product/webpage/service and receive feedback
- **COVID-19 response and strategies**
Investigate what/how customer trends have changed in relation to your industry in response to the COVID-19 pandemic
Discover opportunities to diversify your organisation to become more resilient to global change

2. What will your organisation receive?

All clients receive a professional-style presentation, delivered by the student group, at the end of the project which highlights their key findings. The contents of the presentation depends on the scope of the project, but will typically include a synthesis of their research from the following options:

- Interview data and conclusions drawn (data must already exist, as surveying is not accepted as part of the programme)
- Collation of primary/secondary research
- Results from user experience testing (e.g. verbal feedback, data collection and analysis)
- Overview of their recommendation for potential new directions

Clients benefit from a dedicated Programmes Officer at the University throughout the duration of the project for queries and ongoing assistance.

“It was minimal effort on behalf of the organisation to give students some good commercially aimed experience.” Dean Altass-Hye, Native

3. When and how long does a project take?

The Student Consultancy Programme runs twice during the academic year:

Spring 2023: 20 February to 17 March 2023

Students work part-time, approximately 5 hours per student per week

Summer 2023: 5 to 16 June 2023

Students work full-time on the project, approximately 10 hours per student per week

For each cycle, your student group will contribute a combined 100 hours on the project brief. If your project requires more/less time than this, we are happy to discuss alternative opportunities for collaboration with you.

Please see below an exemplar timeline for Summer 2023:

Date	Task
27 February 2023	Project brief applications open
26 March 2023	Project brief applications close
April 2023	Project allocation to student groups, clients register on Riipen, Meet and Greet scheduled
5 June 2023	Day 1 of project work Student groups receive pre-project training (University of Sussex) Meet and Greet takes place between students and client
9 June 2023	Day 5 of project work Students and client have a midway meetup on around day 5 for questions and updates
12 June 2023	Day 6 of project work Students receive training on how to present their project findings (University of Sussex)
16 June 2023	Day 10 of project work Students deliver final presentations to the client (students will liaise with client on a suitable date and time) Students receive training on how to present their work experience on CVs and during interviews (University of Sussex)

Please note that during the project, we ask clients to be available to speak with their student group on a minimum of three occasions:

- 1) Meet and Greet and project briefing on day 1 (date/time to be organised with the Career Lab team)
- 2) Midway meetup on around day 5 (date/time to be organised by the student group)
- 3) Final project presentation on around day 10 (date/time to be organised by the student group)

4. What we need from you

- Write a brief project proposal as part of the expression of interest form.
- Provide a key contact person who is available for the initial introduction meeting, midway meetup, and final presentation with the student group.
- When prompted, register an account with the University's consulting platform, [Riipen](#).
- Be available to discuss your project further with the Career Lab team to confirm its suitability and next steps.
- Engage with and support your allocated student group, including provision of all necessary materials to set students up for project execution, e.g. relevant context, data and examples of deliverables.

5. What to consider when proposing a project

Please be aware of the following when proposing a consultancy project:

- 1) Projects should not require any expert knowledge of your industry/organisation that cannot be feasibly gained within the timeframe of the project (i.e. the brief must not be technical or require specialist knowledge/experience). Your student group will be mixed discipline.
- 2) Due to the short duration of the programme, projects should not require access to specialist systems/databases that require additional training.
- 3) Projects should be discrete, contained and meaningfully completed in 100 hours (including research, analysis, write-up time).
- 4) Projects should not require students to conduct a survey with the public or other students.
- 5) Projects where external perspective is valued and important for decision-making should not be included.
- 6) The programme is suitable for 'kick off' projects that explore new ventures and opportunities.

Students will be undergraduate final year and taught postgraduate students from any degree studied at the University of Sussex. They will have strong research skills, a willingness to learn and will receive training and support throughout the project.

Please note: if the topic area requires the student group to sign a non-disclosure agreement, we can support you with this.

“We would definitely recommend the programme if the organisation has a suitable, discrete project. Our experience was valuable and gave us insights and potential solutions we did not previously have.” Previous project host

6. Example project brief and topics

Please see below an example of a completed expression of interest form:

- What is the challenge that you would like our students to tackle?
We would like to tackle the challenge of communicating our sustainability efforts with our local community, particularly with people who are not already engaged with, and passionate about, sustainability.

- Please list up to four specific questions, or tasks, that you would like the students to work on
 - 1) Conduct competitor research into what other businesses and industries do to communicate their sustainability efforts to the public. Are any of these activities targeted specifically towards young people? If so, what does it include?
 - 2) Consider the cost of each strategy and the potential size of audience.
 - 3) Looking at the sustainability section of our newsletter, what recommendations would you make to improve the readership?

Other project topics may include:

- We wish to launch a new charity-arm to our business. Please provide us with suggestions as to how we can successfully launch this charity-arm to the local community
- We wish to raise our profile as an equal-opportunities employer. Please suggest ways in which we can improve our recruitment of LGBTQ+ staff.
- Please test the useability and navigability of our new webpage. Suggest ways that we may improve traffic to our webpages. What works, what doesn't?
- We are an eco-conscious clothing retailer. How can we reduce our carbon footprint in both production and transportation?
- I would like to create an online magazine for my young students to submit their work to. Please suggest three suitable online publishing platforms that I could use to create this magazine for my students. From your research, please advise on your preferred platform from your shortlisting.
- Please conduct a competitor analysis on our industry in the UK. Based on your research, who are our top competitors? What do they do well? What do they not do so well on?

Please note: we cannot accept project briefs that require the students to conduct a survey with the public or other students.

We may be able to offer students the chance to visit your organisation's workplace during the programme. You will be asked in the Expression of Interest form whether you would like to offer your project as 'online-only' or with an opportunity to visit your organisation in person. You must have employer's **liability insurance** to offer in person activities and conduct a risk assessment.

7. Express your interest in becoming a client

Registration/ log-in is required at: [University of Sussex CareerHub](#)

In order to express your interest in hosting a consultancy project, organisations must complete the following form:

[Career Lab: Student Consultancy - Expression of Interest Form \(Organisations - Summer 2023\)](#)

If you have previously hosted a project, please submit a new form.

The closing date for expression of interest is **26 March 2023** for Summer 2023 entry. Early applications are advised as we may close applications sooner.

Please note that submitting an expression of interest is not a confirmation of involvement, however, be assured that if your project proposal is not a suitable fit for this programme we will very happy to discuss alternative opportunities to collaborate with you.

If you have questions about any stage of the process, please do not hesitate to contact us: careerlab@sussex.ac.uk
